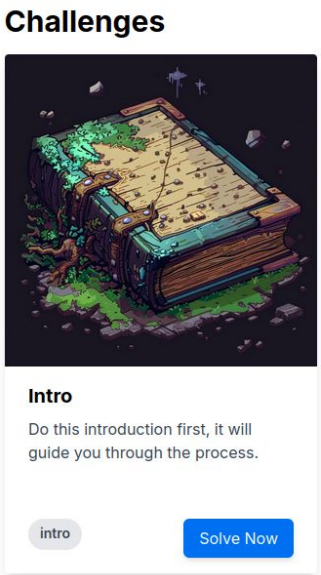
# P&S CASH

## Project Introduction

Joël Mathys

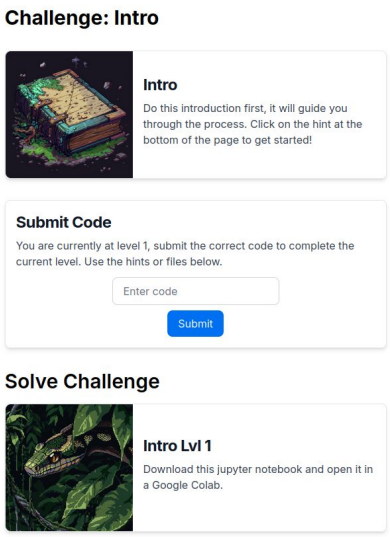
# Project

- Design your own Challenge to be solved by other students
- Work alone or in teams of 2 students
- Required submissions:
  - Own challenge (challenge req.)
  - PDF Report (report req.)
  - 5’ Presentation in Session V (presentation req.)
- Solve 3 User challenges



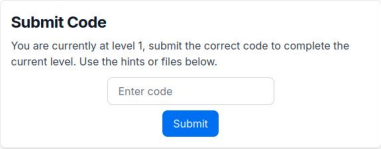
# Challenge Requirements

- Build on top of provided template, single .py script
- Must contain 3 levels
- Focus on a theme, concept (area of computer science) and tasks
  - elementary: theme = sherlock holmes, area= cryptography, tasks=crack ciphers
- Your script generates the jupyternotebooks
  - Content must be dynamic and different for users (while the solution code can be the same)
- Must include a master solution which solves challenge automatically



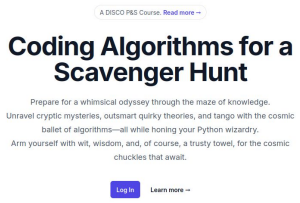
# Report and Presentation

- For project submission:
  - Must have a .py file according to the specifications
    - Then TA will try to generate the challenge, might need revision if this step fails
  - Include a PDF report, max. 2 pages (not including references), see overleaf template
  - In session 5, in a chat with TA, all team members must be able to explain the different level and solution designs
- Late or incomplete submissions will result in additional challenges



# Timeline

- Submission Deadline: 23.11.2025 (23:59 CET)
- Session III: Project work, Attendance mandatory
- Session IV: Project work, Attendance recommended
  - TAs present for questions
- Session V: Project presentation + Solving 3 challenges, Attendance mandatory



# Questions
